Revision of Proportion Intercept Theorem

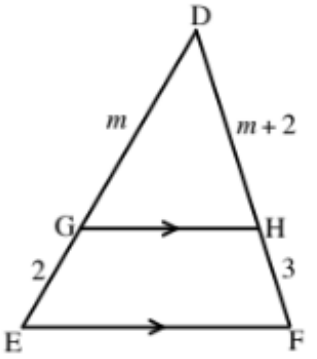

1. In ΔPQR, $ST \| QR$. Calculate the value of y.

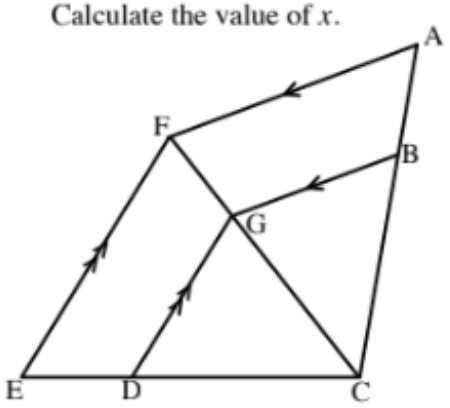

2. In ΔACE, $BD \| AE$. Calculate the value of y.

3. In ΔDEF, $GH \| EF$. Calculate the value of m.

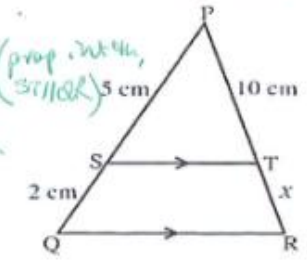

4. In ΔACF, $AF \| BG$ and in ΔCEF, $EF \| DG$. $ED = 22$cm, $DC = 33$cm, $BC = 15$cm and $AB = x$. Calculate the value of x.

MEMO:

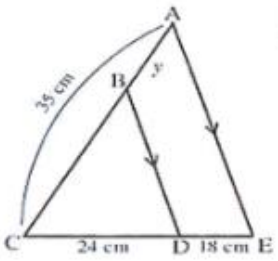

1. In ΔPQR, ST∥QR. Calculate the value of x.

$\frac{x}{10} = \frac{2}{5}$ (prop. int. th, ST∥QR)

$\therefore x = 4$ cm

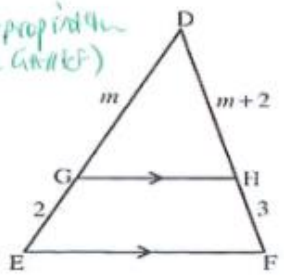

2. In ΔACE, BD∥AE. Calculate the value of y.

$\frac{y}{35} = \frac{18}{42}$ (prop int ths, BD∥AE)

$y = 15$ cm

3. In ΔDEF, GH∥EF. Calculate the value of m.

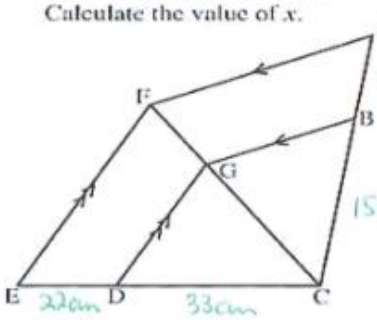

$\frac{m}{2} = \frac{m+2}{3}$ (prop int ths GH∥EF)

$3m = 2m + 4$

$m = 4$

4. In ΔACF, AF∥BG and in ΔCEF, EF∥DG. ED = 22cm, DC = 33cm, BC = 15cm and AB = x. Calculate the value of x.

$\frac{22}{33} = \frac{FG}{GC}$ (prop int ths FF∥CB)

$\frac{FG}{ae} = \frac{x}{15}$ (prop int th FA∥CB)

$\frac{2}{3} = \frac{x}{15}$

$x = 10$ cm

5. In ΔDEF, GH∥EF. DG : GE = 5 : 3 6
DE = 32 mm and
Find the length of

In PQR, ST∥QR. PQ = 35 mm,
and QS = 14 mm.
