GRADE 10

QUESTIONS FROM A PAST CYCLE TEST

QUESTION 2

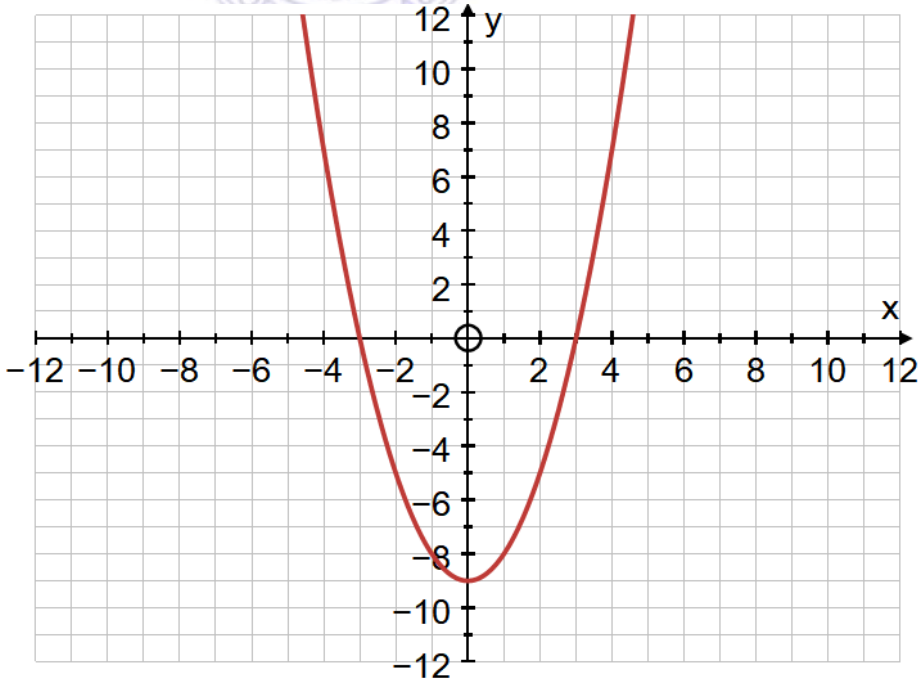

A function $f(x)$ is defined as: $f(x)=7x^2-x+6$

(a) Determine $f(-2)$. (2)

(a) Find x if $f(x) = 12$ (3)

QUESTION 4

Given: $f(x)=x^2-9$

(a) On the same set of axis sketch $g(x)=3x-9$, clearly show all intercepts. (2)

(b) Write down the range of f. (2)

(c) For what values of x is $f(x)\geq 0$? (2)

(d) Give the coordinates of the points of intersection between $f(x)$ and $g(x)$. (4)

(e) If f is moved up 5 units, what is the equation of the new function? (1)

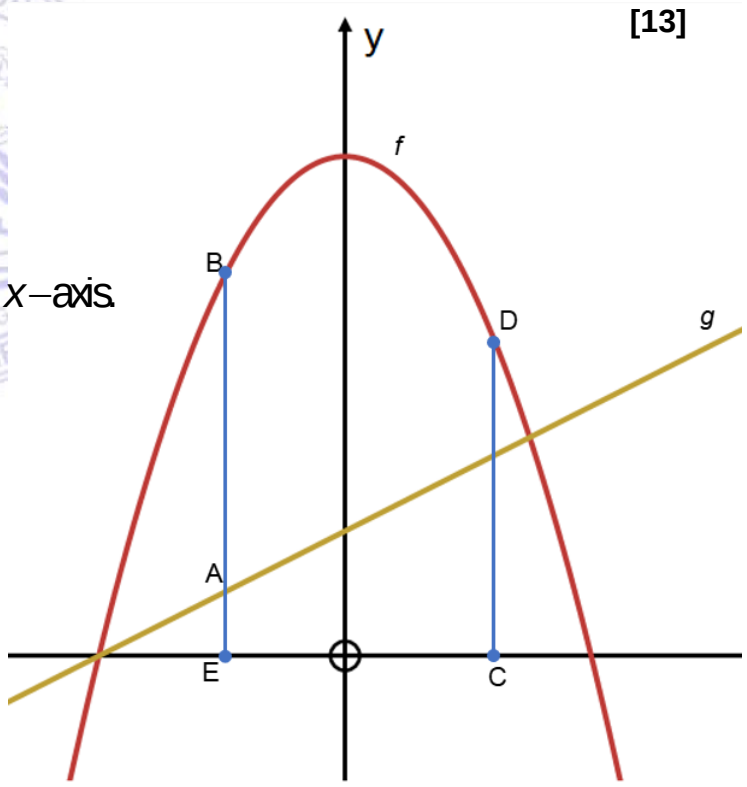

(f) For which values of x is $f(x)$ decreasing? (2)

[13]

QUESTION 5

In the diagram alongside:

- $f(x)=16-x^2$
- $g(x)=x+4$
- Lines EAB and CD are perpendicular to the $x-$axis.

(a) If OE is 2 units, calculate the lengths of:

(1) AE (2)

(2) BE (1)

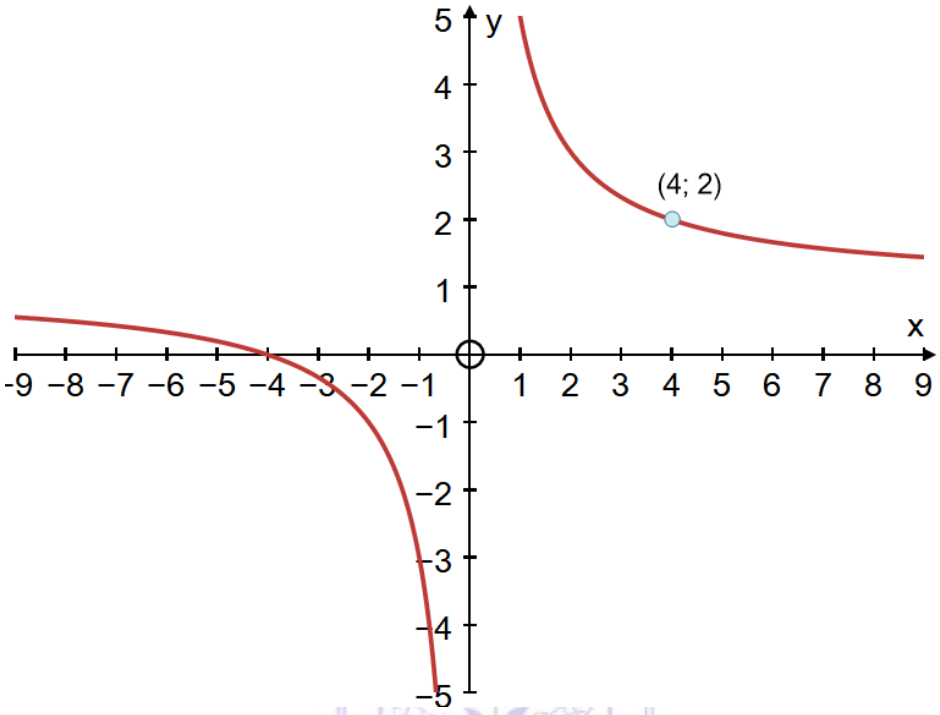

(3) AB (2)

(b) If CD is 7 units, calculate the length of OC. (3)

[8]

QUESTION 6

The equation of the function $g(x)=\frac{a}{x}+q$ is shown below. It passes through the point $(4;2)$ on the graph of g and has a range of $y\in(-\infty;1)\cup(1;\infty)$.

(a) On the above diagram, clearly indicate both asymptotes of $g(x)$. (2)

(b) Determine the equation of g. (3)

(c) Determine the equation of h, the axis of symmetry of g which has a negative gradient. (2)

(d) Sketch the graph of h on the above diagram. (2)

(e) Determine the equation of $p(x)$, which is the reflection of $g(x)$ about the $y-$axis. (2)

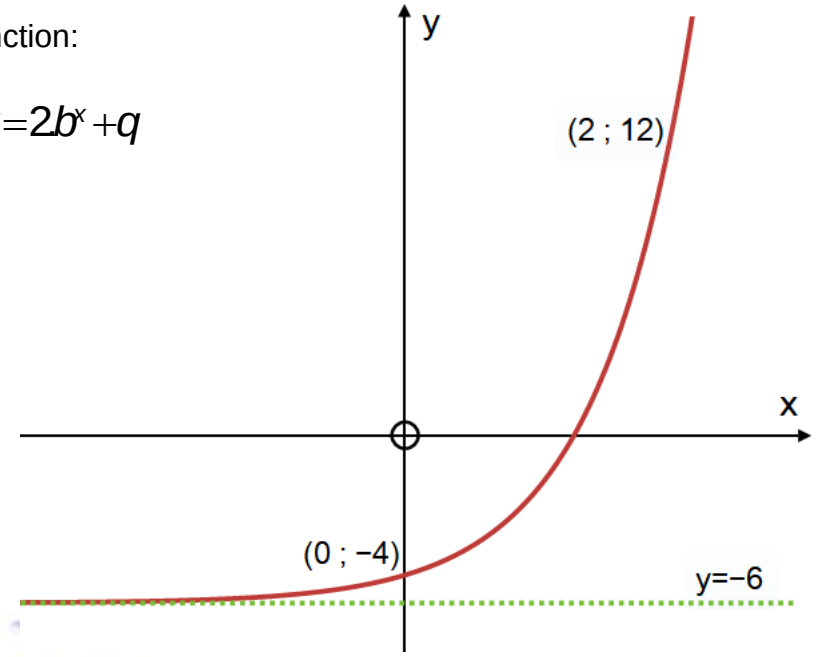

(f) Write the equations of the asymptotes of $f(x)$ if $f(x)=g(x)+3$. (2)

[13]

QUESTION 7

Determine the equation of the following function:

$$y=2b^x+q$$

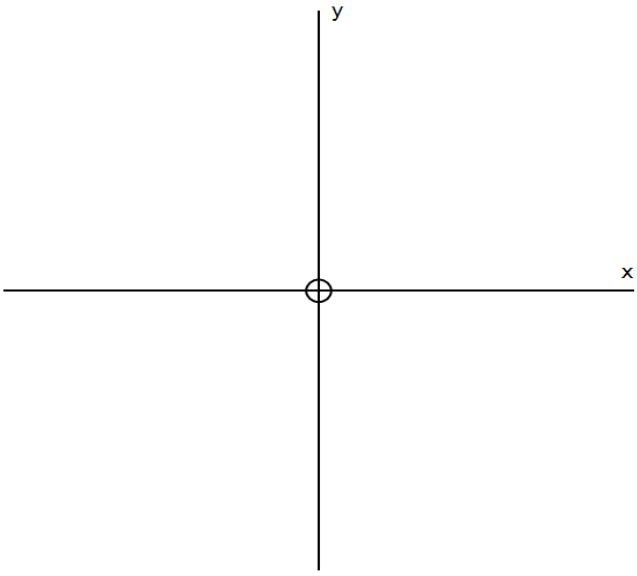

[4]

QUESTION 8

A hyperbola, h, is described with the following characteristics:

- The equation of the vertical asymptote is $x=0$
- The range of h is $y \in R; y \neq 3$
- The x-intercept of h is $(2;0)$

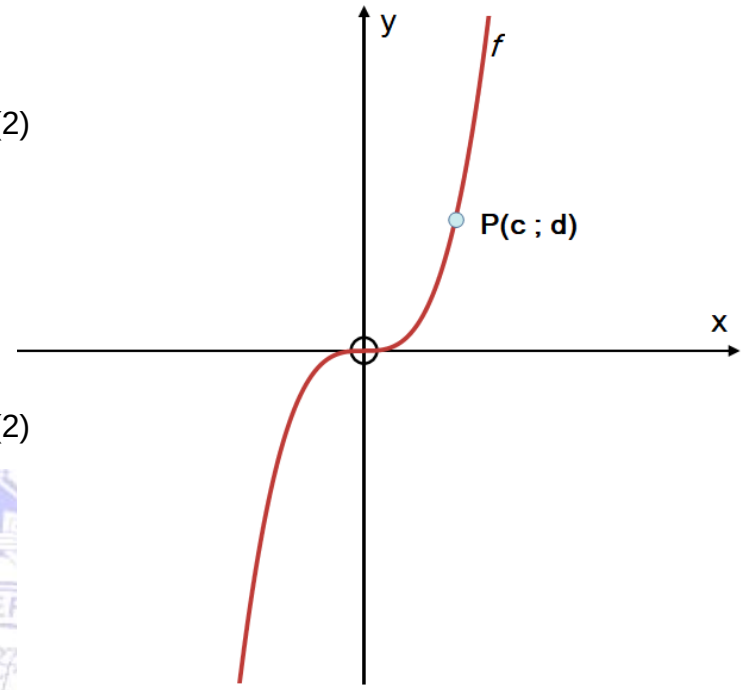

Draw a rough sketch of h. Show all asymptotes and intercepts. [4]

QUESTION 9

Sketched is $y=f(x)$ and $P(c;d)$.

Give the coordinates of ***P*** in terms of ***c*** and ***d*** if:

(a) $y=2f(x)$ (2)

(b) $y=f(-x)+2$ (2)

[4]
