GRADE 10 **MATHS TEST** **2009**
MONEY MATTERS **TOTAL : 30**

1. Samantha invests R25 000 at 17% simple interest over 3 years. Brendan invests R25 000 at 14% compound interest over 3 years. Who made the better investment and why? (5)
   Sam R 37 750 this was a better result than Brendan's R37 038,50
2. Fiona saves for an overseas holiday in 5 years time. She opens a savings account and deposits R4 000 immediately. One year later she adds another R2 000. One year later she deposits R3 000 into the account, followed by another payment of R3 800 yet another year later. Calculate the total amount of money saved at the end of 5 years if the interest rate was 12% p.a. compounded annually. (6)
   R19 177,91
3. Calculate an interest rate compounded annually such that your earnings will double every 6 years. (2 dec. places) (3)
   12,25%
4. A TV set can be bought for a cash price of R4 500 or with a hire purchase agreement as follows: R675 deposit, then 24 monthly payments at 5%. No insurance costs need to be met because of the deposit.
   How much will the TV cost in total under the hire purchase agreement? (5)
   R4 882,50
5. A car costs R105 000 now. The average inflation rate has been 8,05% p.a. over the last 4 years. How much did the same model car cost 4 years ago? (3)
   R 77 035,38
6. Mrs van Rooyen works in London for 2 years as a teacher. She manages to save £150 per month. How much money in rands would she save in the time she works there? (Exchange rate being R10,74 to the pound). (3)
   R38 664
7. As a loyal restaurant customer of Jino's, you tip 12% on your bill. If your bill is R78 how much will you add on for the tip? R9,36 (2)

8.

The graphs show performance of an investment under certain conditions.

a) How much money was initially invested in each investment? R 12 000 and R 9 000
b) Which graph shows growth under simple interest conditions? Straight line
   What does the other graph indicate? Compound Interest
c) Give a reason for your answer. (3)
   Simple Interest is a fixed growth per year which corresponds to constant gradient

   Compound interest is a curve as the increase is on the increase and this will be represented in a curve.
